the product.**

Making all your  
products easy to  
stack with our  
VPM series.

**Verbruggen**  
Palletizing Solutions

ENGINEERING FOR THE FUTURE,  
BUILDING FOR GENERATIONS.

# What are you looking at here?

We are pleased to take you on a short journey introducing you to the history of Verbruggen Palletizing Solutions (VPS). We want you to know WHAT we do, but also WHY we do it and HOW it's done.

## The Pioneer: Alex Verbruggen

Alex Verbruggen and his brother Mart established VPS in 1991. Alex took paper and pencil and approached entrepreneurs who were looking for a better way to stack unevenly shaped and heavy packages on pallets. Alex had an eye for detail and listened to the specific wishes of our clients, but he also wanted to build a machine that would not only meet the clients' expectations. He envisioned a machine that would exceed their expectations, so many commodities could be prepared for shipping in less time.

## A New Generation

That innovative spirit continues within VPS today. With more innovative products than ever and a client base worldwide, the next generation of VPS also strives for a company that looks beyond our machines. We want to inspire our co-workers, partners, and clients to unite and continue to create more possibilities and optimizations together. Above all, we want to encourage each other to see the value in what we are contributing to with the solutions we create, which is an incredible amount of food and goods being packaged and transported to people all over the world. From potatoes to wood, and from flour to salt. That is not only impressive, but also a reason to celebrate. Hence the three words that bring the identity of VPS together: **Create, Cooperate, Celebrate.**

Are you in?

Sincerely,

Maarten Verbruggen

Wouter Verbruggen

## Innovative Machine Design

Our team is comprised of more than 125 highly skilled professionals possessing widespread knowledge in all areas of engineering and control technologies. This allows us to produce state-of-the-art machines. We innovate continuously in order to be able to palletize even smarter. Because of this, our wide product range is known in the market as very progressive and reliable.

## Maximum Utilization of Your Machine

Our customers value highly the long maintenance intervals, maximum operational reliability and the long overall life span of our machines. Our smart machine designs ensure that only the minimum number of moving parts are used. Our dedicated Service Team is also available 24/6 to provide professional service support via remote service capability, or if required onsite.

# VPM-5

- ✓ Limited footprint
- ✓ Low level infeed
- ✓ Limited investment

Looking for an efficient stacking solution while eliminating the need for manual labor? Palletize your products with the innovative technology of the VPM-5. Automated stacking becomes a reality with the accurate and overlapping placement of products by a manipulator & formation collar creating consistent and stable pallet loads. This machine is manufactured using the latest in Dutch technical innovation.

### What our customers say about the VPM-5

“ Our Verbruggen VPM-5 palletizer has been working on the farm since 2017 and is probably the most reliable machine here. It faultlessly builds pallets day in, day out without any fuss. It’s just ready to go whenever we are. Even after standing idle for months, the VPM-5 can be started up and it starts working instantly. I cannot fault it.

Mike Cumming, Lour Farms, Scotland

# VPM-7

- ✓ Limited footprint
- ✓ High level infeed
- ✓ High stacking quality

Looking for an efficient stacking solution while eliminating the need for manual labor? Palletize your products with the innovative technology of the VPM-7. Automated stacking becomes a reality with accurate and overlapping product placement combined with adjustable vertical compression force inside a 4-sided enclosed stacking bin. This machine is manufactured using the latest in Dutch technical innovation.

Did you know that the package entry system of our palletizing solutions can be configured in many different ways to meet your needs?

### What our customers say about the VPM-7

“ Dealing with Verbruggen has been easy and a pleasure and I would certainly recommend them to others. The employees who have been on site were very pleasant and helpful, they are a credit to the company.

John Millar, Prieston Farm (UK)

# VPM-8

- ✓ Fully automatic
- ✓ High level infeed
- ✓ High stacking quality

Do you need to stack your products consistently & quickly? Palletize with the innovative technology of the VPM-8 for fast product stacking while eliminating manual labor efforts. Fully automatic stacking at fast speeds becomes a reality with accurate and overlapping product placement, combined with adjustable vertical compression force inside a 4-sided enclosed stacking bin. This machine is manufactured using the latest in Dutch technical innovation.

### What our customers say about the VPM-8

*In 2017, we automated palletizing with a VPM-8 Verbruggen machine. Since then, it runs flawlessly daily with minimal maintenance. The after-sales team is responsive. Our pallets look fantastic, leading us to add two more machines at our new site—we're highly satisfied.*

**Sarl Ougier, France**

# VPM-10

- ✓ Fully automatic
- ✓ High level infeed
- ✓ High stacking quality

Looking for an efficient stacking solution while processing your goods consistently & quickly? Palletize with the innovative technology of the VPM-10 and upgrade your business. Fully-automatic stacking at high quality becomes a reality with accurate and overlapping product placement, combined with adjustable vertical compression force inside a 4-sided enclosed stacking bin. ### What our customers say about the VPM-10

“ We got the Verbruggen VPM-10 palletizing machine to improve logistics, reducing loading times and organizing warehouses. It took 60 days to install. Adapting processes helped solve initial issues, leading to ROI within 3.5 years. Our alliance with Verbruggen offered cutting-edge technology, agility, reliability, ongoing support, and good communication.

Arturo Luis Marasca, Molino Chabas S.A.

# VPM-14

- ✓ Fully automatic
- ✓ High speed palletizing
- ✓ High stacking quality

Looking for an efficient stacking solution while processing your goods on high-speeds? Palletize with the innovative technology of the VPM-14 and upgrade your business. Fully-automatic stacking at high quality becomes a reality with accurate and overlapping product placement, combined with adjustable vertical compression force inside a 4-sided enclosed stacking bin. This machine is manufactured using the latest in Dutch technical innovation.

### What our customers say about the VPM-14

Working with Verbruggen has been a simple, efficient and well executed process. We first installed a second hand machine and have now gone with a brand new machine. The reliability of this 20 year old machine was fantastic so we are confident in the new bag and box machine. Thank you to the Verbruggen team for a streamlined process.

Daniel Lovett, Lovett Family Farms Ltd. New Zealand.

# VPM-BL

- ✓ Limited footprint
- ✓ Low and high level infeed

Looking for an efficient stacking solution while processing your goods consistently & quickly? Palletize with the innovative technology of the VPM-BL and upgrade your business. With the optionally extension of an automatic pallet transport system, fully-automatic stacking becomes a reality with accurate and overlapping product placement. This machine is manufactured using the latest in Dutch technical innovation.

Did you know that this palletizing solution is designed with care for minimum product impact during layer and stack formation?

### What our customers say...

“The Verbruggen VHV has been one of the best upgrades that we at GPOD of Idaho have done. What we like about the VHV is its reliability. The service from the Verbruggen team has also been very helpful.”

Clayne Bloom, GPOD Idaho

# Create your customized solution

## The project roadmap

The roadmap shows the stages in a typical project. Here you can see how we collaborate with our clients to deliver the optimal solution.

### 1 Contact

Stack your product fast and tight and reduce labor at the same time? In that case, contact us.

### 2 Customization

We will help identify your needs based on your product type and location requirements. We will provide a complete proposal with a 3D-layout drawing for your unique situation.

### 3 Production

The production of your machine will be promptly started in our factory located in Emmeloord (NL) upon your acceptance of the proposal. After production the machine will be tested thoroughly before shipment.

### 4 Installation

Our experienced engineers completely install and test the machine on site. Then they provide an operator training to machine users including machine operation, safety and alarm identification.

### 5 Service

Our service engineers are available ensuring service during your production time. They are ready to help troubleshoot, offer preventative maintenance inspections or provide required parts, and upgrades to your machine.

# Maximum uptime of your machine

## Contact us 24/6

Your machines should be ready and available for timely production on a constant basis. Our service team is available and ready 24/6 to support customers worldwide, ensuring you that your machine is always ready and available for you.

## Prompt service support

Our experienced service engineers are ready to assist with on-site service support when required. The majority of service calls are now resolved remotely without requiring on site visits. Remote service accessibility is standard on all our machines allowing engineers to login and access the machine condition, troubleshoot with you on site and update the machine settings if necessary. This allows us to help you as efficiently as possible.
